Jodie Wantono

QA & Test Automation | Product | PMO

Jakarta, Indonesia | jodie.wantono@gmail.com | linkedin.com/in/jodie-w-709377145 | jw-bot76.github.io

Summary

Six years across product, PMO and QA, the last three in fintech. I know the business flow end to end, so I know what to test and why, and I build the tools that help test it. Experience across securities, mutual funds, government bonds and logistics, working with teams in Bahasa Indonesia, English and Mandarin.

2 wks → 2 days
regression testing, with the QA team

−70%
late deliveries, with a shared tracking board

−60–70%
stuck parcels, with JRIS reporting

24,892
active VIP clients on J&T's VIP Platform, Dec 2022

Experience

Quality Assurance & Technical Testing
May 2026 – Present

PT Tuntun Sekuritas Indonesia

- With the QA team, cut regression from 2 weeks to 2 days, and large-project testing from ~1 month to 3–4 days, over several releases of moving to AI-assisted testing.
- Test releases across API, Android, iOS, web and the Admin Console; built QA Hub, our internal QA tool, from my own daily testing work.
- Record every pass or fail with a screenshot and the backend response, so developers can act on it straight away.
- Help QA teammates set up and use the same AI tools.

Mutual Fund & Government Bonds Product Manager
Jul 2025 – May 2026

PT Tuntun Sekuritas Indonesia

- Delivered government bonds in 2025 with the DBS API integration and settlement flow.
- Wrote the PRDs and checked the Figma designs finalized by the designer.
- Led requirement reviews with business, QA and engineering to align scope, edge cases and definition of done before development.
- Organized production customer feedback in the requirement pool and followed it through prioritization to implementation.

Business PMO
Apr 2025 – Jul 2025

PT Tuntun Sekuritas Indonesia

- Helped teams reduce late deliveries by 70% by running a central tracking board: 60+ requirements from four teams in one table.
- Wrote submission guidelines and SOPs, including an MRD deadline two months before go-live, and ran the weekly requirement review.

Mutual Fund Business Product Manager
May 2023 – Apr 2025

Antai Securities Limited, then PT Tuntun Sekuritas Indonesia from 2024

- Ran market and customer research, collecting respondent data and presenting research reports every week.
- Owned the customer UI/UX experience: wrote the MRDs and built the Figma prototypes.
- Launched the first mutual fund feature in Dec 2023 and a major improvement in Aug 2024.

IT Product Specialist, Product Manager for JRIS & VIP Platform

Oct 2020 – Apr 2023

PT Global Jet Express (J&T Express)

- **JRIS:** helped J&T teams reduce stuck parcels by 60–70% and improve SLA with a reporting system for web, Android and iOS that I led from proposal, product and API requirements to the end of development (V1.0, June 2022).
- **VIP Platform:** rebuilt the platform for key-account clients with a team of six, from phased roadmap and field-level requirements to UAT and migration, replacing manual payment reminders with self-service.
- Wrote the test cases and import rules myself, covering 23 order-import fields against 16 error conditions, and followed issues until fixed and retested.
- Handled the VIP Admin Console, the data source for the platform and the VIP App, and coordinated shared functions with the app's PM.

Web Developer

Mar 2020 – Aug 2020

PT Surya Kencana Loka

- Built responsive layouts with HTML, CSS, Bootstrap and jQuery, and fixed display and browser issues.

Technology Education Teacher

Feb 2018 – Jun 2018

Neili Senior High School, Taoyuan, Taiwan

- Designed and taught technology lessons, projects and assessments for students at different skill levels.

Strengths

Structuring large projects into phases. Edge-case thinking. Owning quality through UAT and release. Technical fluency with APIs, backend fields and logs. Bridging business and engineering across three languages.

Skills

QA & automation	API testing, iOS and Android, web, Admin Console testing, UAT, Playwright, AI-assisted test cases, QA tooling
Product	User research, competitor analysis, MRD and PRD writing, user flows, interaction design, API and settlement flows
PMO	Project tracking, delivery management, SOPs, cross-team visibility
Domain	Securities, mutual funds, government bonds, payments, logistics
Tools	Jira, Confluence, Figma, Axure, Postman, SQL, Node.js, Claude, DingTalk AI tables

Education

Bachelor of Engineering, National Taiwan Normal University, 2013 – 2017

Department of Technology Application and Human Resource Development (科技應用與人力資源發展學系)

Languages

Bahasa Indonesia: native

Mandarin: native-level (HSK 6, HSKK, 2023)

English: working proficiency (TOEFL, 2020)

Awards & certificates

Silver Award, Information Application Service Innovation Competition, 2015

Outstanding Award, National University Campus Information Application Service Innovation Competition, 2014

Outstanding Award, National Taiwan Normal University Undergraduate Exhibition, 2016

High School Technology Education Teacher Training Certificate
